		GT Line			

The fuel consumption you achieve, and CO_2 produced, in real world conditions will depend upon a number of factors: including the accessories fitted (post registration), variations in weather, driving styles and vehicle load. There is a new test (WLTP*) used to measure fuel consumption and CO_2 figures. The CO_2 figures shown are NEDC equivalent, calculated using EC correlation tool which converts WLTP figures to NEDC figures, however, these NEDCeq figures are based on the outgoing test cycle (NEDC**) and will be used to calculate tax for first registration.

*WLTP - Worldwide harmonised Light vehicles Test Procedure. **NEDC New European Driving Cycle - Estimated data, provided for information only and subject to approval

^ 'LOW': Low speed city driving, representative of city centre driving, maximum 35mph.
^^ 'MEDIUM': Medium speed town driving, representative of town or suburban driving, maximum 50mph.
^^^ 'HIGH': High speed rural driving, representative of A-road or dual carriageway driving, maximum 60mph.
^* 'EXTRA HIGH': Extra High speed motorway driving, representative of a typical European motorway, maximum 81mph.
^*^ 'COMBINED': A mixed journey average of all elements
Figures quoted reflect a range of configurations (including non-UK market vehicles) and are subject to changes resulting from ongoing product development, range evolutions, testing and evaluations.

All-new PEUGEOT 208 GT Line: Dimensions

EXTERNAL DIMENSIONS

Length (mm)	4055
