The WLTP (Worldwide Harmonised Light Vehicles Test Procedure) is used to measure fuel consumption and CO2 figures. CO2 figures above are for a standard vehicle without any additional optional equipment. The addition of optional extras could increase the certified CO2 emission output.

Crew Vans with a payload of less than 1-tonne may be eligible for VAT reclaimable status, subject to further HMRC assessment. Customers are advised to consult their local HMRC office or visit <https://www.gov.uk/government/organisations/hm-revenue-customs> for further details in relation to VAT reclaimable status. Ordered options may also impact payload.

(1) Without driver. Kerb weight is calculated for a European base specification vehicle including oil, water, lubricants, tools, spare wheel and 90% full fuel tank. Weights may change with the addition of equipment.

(2) Maximum indicative payload is calculated as the difference between GVW and kerb weight. However, due to manufacturing tolerances and differences in the specification of UK vehicles, the mass in service figure provides a closer indication of the vehicle weight and therefore enables a more realistic payload to be calculated. An individual vehicle must be weighed to establish the exact kerb weight and payload applicable to that vehicle. It is the responsibility of the driver to ensure the vehicle is operated within the legal limits

(3) Within limits of GVW.

(4) Maximum recommended towing weight within limits of GTW.

Figures quoted reflect a range of configurations (including non-UK market vehicles) and are subject to changes resulting from ongoing product development, range evolutions, testing and evaluations. Economy figures are official WLTP test fuel consumption figures. The CO2 figures shown are NEDC equivalent, calculated using EC correlation tool which converts WLTP figures to NEDC figures.
