SpeedCam/Danger Zones package

The SpeedCam/Danger Zones package helps you identify situations which require increased attention by sending you both audible and visual alerts (subject to settings). Within the UK the service highlights different types of speed cameras, and red light cameras, as well as accident blackspots. While the service is operational across most of Europe, it adapts as necessary when travelling in different countries to ensure the local laws with respect to Speed Camera identification are followed. This option can be added to your Citroën Connect Nav subscription at any time. Please visit <https://services-store.citroen.co.uk/> to subscribe.

† Maximum indicative payload is calculated as the difference between GVW and kerb weight. However, due to manufacturing tolerances and differences in the specification of UK vehicles, the mass in service figure provides a closer indication of the vehicle weight and therefore enables a more realistic payload to be calculated. An individual vehicle must be weighed to establish the exact kerb weight and payload applicable to that vehicle. It is the responsibility of the driver to ensure the vehicle is operated within the legal limits.

¹ Maximum allowable payload. Exact value varies depending on specification of completed vehicle.

² Floor cabs cannot be used for Tipper or Dropsides. They can only be used for vehicles with a completely enclosed box body.

³ On Back to Back Cab, until further notice, AL-KO are unable to provide a chassis equipped with ESC for any wheelbase greater than 4,400mm or for a tandem rear axle (regardless of wheelbase length).

⁴ Please note: there may be a +/- 5% variance in payload of these models, due to natural variations in the raw materials used.
